It offers the perfect introduction to Sarawak flora and fauna. The 16 square kilometres of primary forests is home to seven distinct ecosystems; beach vegetation, cliff vegetation, mangrove, peat swamp forests, mixed dipterocarp forests, heath forests and grasslands. Wildlife thriving in the area includes the rather intrusive long tailed macaques which roam all over and their cousins, the silver leaf monkeys and the long-nosed, potbellied proboscis monkey. Other denizens include flying lemur, mouse deer, bearded pigs, bats, tarsiers, slow loris and palm civet cats. Please note that these animals are wild and therefore, there is no guarantee that visitors will see them. Covered with primary forest, the orang utans roam freely. Other animals are also kept at the centre. There are feeding times scheduled every day at the feeding platform. However, always bear in mind that the main aim of the Centre is to return these animals back into their habitat. Your boat will go near the mangrove-lined banks to spot Proboscis monkeys and other wildlife there. Do note that sightings of wildlife cannot be guaranteed although we do enjoy a high success rate with the dolphins. Crocodiles are sometimes seen on the mud banks basking in the evening sun.
